

and don't forget
ELECTROLUMINESCENCE

Effects Input/Reverb.

The H.H. range of effects modules link in and draw supply voltage from the amp. This feature eliminates the disadvantages of costly battery replacement necessary in traditional effects systems.

The latest Accutronics reverb unit is controlled by the Reverb footswitch as a neat part of the effects system. No more hassles with untidy effects — the H.H. system does it all for you.

The extra features

On the recessed back panel we have provided Echo Send, Echo Return, Output to Slave and Mixer Output sockets. H.H. amps are designed to give all the connections that a professional musician ever needs.

Combo 212

Ordinary combos consist of a baffle board with four sides and an open back. Half the sound disappears out of the back and only half comes out of the front where it is needed. The H.H. combo 212 is a totally enclosed cabinet with a solid integral back resulting in a full but controlled sound with lots of punch.

An amplifier as fine as the V-S Musician deserves a good speaker to do justice to the tone range it can produce. The combo 212 has two 12" heavy duty H.H. Acoustics loudspeakers designed for quality and performance. Unlike other units on the market, they are guaranteed for a year.

Recognisable H.H. quality is built into every detail of this combo — high density polythene corner mouldings for protection — tough extruded polyethylene grill, 'crocodile'

Combo 212

vinyl covering, heavy duty castors, side carrying handles. Also included is a waterproof cover.
