

BASS MACHINES

Great bass amplifiers built for demanding professionals

The quality of bass playing advanced a long way in the 1970's in terms of style, technique and equipment, clearly the 1980's bass player will demand even more progress. To meet this challenge HH once again move ahead and apply advanced technology to the creation of blistering new bass amp systems.

Big power MOS-FETS generate cool reliable Watts

HH have applied the very latest power MOS-FET devices to generate 250 Watts of cool, clean high level bass power with plenty

of headroom available to handle those tough transient signals without break-up. Also a wide smooth frequency response is considered essential to make sure that everything from low E's to soaring octaves are reproduced with accuracy and clarity.

Two separate channels plus the innovative 'Sound Switch' gives many sound variations

This new feature lets you play your bass through channel 1 and 2 both of which can be

independently pre-programmed for different overall tone and dynamics. The Bass Machine 'Sound Switch' function uses the latest analogue switching circuit techniques and includes LED's on the front panel and Footswitch Unit to show you which channel is live at-a-glance.

Compressor Circuit allows more control over instrument dynamics

The Compressor circuit senses the onset of clipping and electronically reduces the gain to
